Lake Conroe Levels and Rainfall in Montgomery County

We have received approximately 4-6" of rainfall in the Lake Conroe watershed since late Sunday evening. Lake levels are currently at 202 and we are releasing just under 6,000 cfs. We do not anticipate a release rate from the dam or lake levels to exceed what we saw last month or in the spring of 2015.

We are certainly sensitive to the severe conditions in the southern part of the county. Nearly 8-10" of rainfall has occurred in certain areas. We will continue to monitor the forecast and make adjustments as necessary.

The chart below shows the inflow at several of our monitoring gauges.....
