Water Line Construction Update

Traffic Control- Grogans Mill Rd. and Research Forest

As of the morning of Saturday, June 7, 2014, the south bound lanes on Grogans Mill Rd. from South Millbend to the bridge north of Sawdust Rd. will be closed. Traffic will be diverted to the north bound side where cars will run both north and south. The major intersections will remain open to thru traffic.

As of the morning of Monday, June 9, 2014, the outside east bound lane on Research Forest from Greenbridge Dr. to the east of West Trillium will be closed. The inside east bound lane will remain open to thru traffic.

Once the traffic detours are in place, multiple crews will begin working simultaneously in different areas on Grogans Mill Rd. and Research Forest. Work will include open cut and tunnel pipe installations as well as significant pavement demolition and reconstruction on Grogans Mill Rd. and roadway shoulder replacement on Research Forest.

On behalf of SJRA, we appreciate your patience and understanding as we install the water transmission lines for the Ground Water Reduction Program that will be delivering water to The Woodlands as well as areas in Conroe. For more detailed information on traffic as well as the program, please visit www.sjra.net/grp.
