

# Interceptor Discharge Permit Application

*Please complete a separate application for each trap or interceptor on site*

A **grease trap** is a small grease disposal device usually located under the sink and above the ground. Sizes usually will vary from 10 gallons up to 100 gallons.

A **grease interceptor** is located under the ground and it has a greater capacity than the grease trap. Sizes of grease interceptors are usually 500 gallons and up. As provided in the SJRA Grease Program document, an interceptor is intended to intercept, separate and prevent passage of grease, oil, fats, sand, grit, lint, or other objectionable solids into the collection system to which it is connected.

All traps or interceptors should be sized and installed according to the “Guidance Document for Sizing and Installation of Interceptors” prepared by the San Jacinto River Authority.
