

Measuring My Structure

The first type of structure extends out over the water, past the bulkhead; this includes the vessel area's themselves, even though there is no decking covering the area. This measurement is taken at full pool level, regardless of the level of the lake. In the example below, the yearly fee for this license holder would be \$141.00 annually. It is the total square footage of the dock footprint multiplied by our current annual rate per year of \$0.188.

Total Area = 25' X 30' = 750 sqft

The second type of structure may be partially "cut-in" and partially extend out. This measurement is also taken at full pool level, regardless of the lake level. In the example below, the yearly fee for this license holder would be \$116.40 annually. It is the extension square footage multiplied by our current annual rate per year of \$0.188.

*Area of Cut-In < 319 sqft w/extension to be calculated at \$0.188/sqft

The final type of structure is completely "cut-in" to the homeowner's property. We define "cut-in" as being surrounded by 3 sides of land. SJRA does not use a measurement for a "cut-in" structure. A minimum fee of \$60.00 is applied to this structure as shown in the example below.
